Sequence 248585.

The true left end of clone 78673 is
                                                                                                                                                                                                                                                                                            bin/display?db-wormace&class*Sequence &object=E04D5
Current sequence finishing criteria for the C. elegans genome
sequencing consortium are that all bases are either sequenced
unambiguously on both strands, or on a single strand with both a
dye primer and dye terminator reaction, from distinct subclones.
Exceptions are indicated by an explicit note.
IMPORTANT: This sequence is NOT necessarily the entire insert of
the specified clone. It may be shorter because we only sequence
overlapping sections once, or longer because we arrange for a smal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Wilson, R., Ainscough, R., Anderson, K., Baynes, C., Berks, M., Bonfield, J., Burton, J., Connell, M., Copsey, T., Cooper, J., Coulson, A., Craxton, M., Dear, S., Du, Z., Durbin, R., Favello, A., Fulton, L., Gardner, A., Green, P., Hawkins, T., Hillier, L., Jier, M., Johnston, L., Jones, M., Kershaw, J., Kirsten, J., Laister, N., Latreille, P., Lightning, J., Lloyd, C., McMurray, A., Mortimore, B., O'Callaghan, M., Parsons, J., Percy, C., Rikken, L., Roopra, A., Sanders, D., Showhkeen, R., Smaldon, N., Smith, A., Sonnhammer, E., Staden, R., Sulston, J., Thierry-Mieg, J., Thomas, K., Vaudin, M., Vaughan, K., Waterston, R., Watson, A., Weinstock, L., Watkinson-Sproat, J. and Wohldman, P.

Exceptions are indicated by an explicit note. IT may be shorter because we only sequence is NOT necessarily the entire insert of the specified clone. It may be shorter because we only sequence overlapping sections once, or longer because we arrange for a small overlap between neighbouring submissions.

IMPORTANT: This sequence is not the entire insert of clone F53B6. It may be shorter because we only sequence overlapping sections once, or longer because we arrange for a small overlap between
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         neighbouring submissions.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     bin/display705-wormoec&class=Sequence &object=R07E3
bin/display705-wormoec&class=Sequence for the C. elegans genome
sequencing consortium are that all bases are either sequenced
unambiguously on both strands, or on a single strand with both a
dye primer and dye terminator reaction, from distinct subclones.
Exceptions are indicated by an explicit note.
IMPORTANT: This sequence is NOT necessarily the entire insert of
the specified clone. It may be shorter because we only sequence
overlapping sections once, or longer because we arrange for a small
overlap between neighbouring submissions.
This sequence is the entire insert of clone R07E3. The true right
end of clone F41E7 is at 36774 in this sequence. The start of this
sequence (1. .115) overlaps with the end of sequence Z68106.
The end of this sequence (39633. .39736) overlaps with the start of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Wilson, R., Ainscough, R., Anderson, K., Baynes, C., Berks, M., Bonfield, J., Burton, J., Connell, M., Copsey, T., Cooper, J., Coulson, A., Craxton, M., Dear, S., Du, Z., Durbin, R., Favello, A., Fulton, L., Gardner, A., Green, P., Hawkins, T., Hillier, L., Jier, M., Johnston, L., Jones, M., Kershaw, J., Kirsten, J., Laister, N., Laister, N., Latreille, P., Lightning, J., Lloyd, C., McMurray, A., Mortimore, B., O'Callaghan, M., Parsons, J., Percy, C., Rifken, L., Roopra, A., O'Callaghan, M., Parsons, J., Percy, C., Rifken, L., Roopra, A., Saunders, D., Shownkeen, R., Smaldon, N., Smith, A., Sonnhammer, E., Staden, R., Sulston, J., Thierry-Mieg, J., Thomas, K., Vauddin, M., Vaughan, K., Waterston, R., Watson, A., Weinstock, L., Wilkinson-Sproat, J., and Wohldman, P.

This sequence is the entire insert of clone M142.
The true right end of clone C44B9 is at 5059 in thi
Start of this sequence (1. .104) overlaps with the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Current sequence finishing criteria for the C. elegans genome sequencing consortium are that all bases are either sequenced unambiguously on both strands, or on a single strand with both at dye primer and dye terminator reaction, from distinct subclones. Exceptions are indicated by an explicit note.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Current sequence finishing criteria for the C. elegans genome sequencing consortium are that all bases are either sequenced unambiguously on both strands, or on a single strand with both a dye primer and dye terminator reaction, from distinct subclones. Exceptions are indicated by an explicit note.

IMPORTANT: This sequence is NOT necessarily the entire insert of the specified clone. It may be shorter because we only sequence overlapping sections once, or longer because we arrange for a small contract of the specifications once, or longer because we arrange for a small contract of the specifications once, or longer because we arrange for a small contract of the specific or small contract of the specific or small contract or longer because we arrange for a small contract or longer because we arrange for a small contract or longer because we arrange for a small contract or longer because we arrange for a small contract or longer because we arrange for a small contract or longer because we arrange for a small contract or longer because we arrange for a small contract or longer because we arrange for a small contract or longer because we arrange for a small contract or longer because we arrange for a small contract or longer because we arrange for a small contract or longer because we arrange for a small contract or longer because we arrange for a small contract or longer because we arrange for a small contract or longer because we arrange for a small contract or longer because we are longer becau
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The true left end of clone ZK265 is at 1 in this sequence. The true right end of clone ZK265 is at 2412 in sequence Z75713.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      overlap between neighbouring submissions.

IMPORTANT: This sequence is not the entire insert of clone ZK265.

It may be shorter because we only sequence overlapping sections once, or longer because we arrange for a small overlap between
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     http://webace.sanger.ac.uk/cgi-

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The present sequence was obtained from a library of clones of S. aureus WCUH 29 in Escherichia coli. The DNA sequence can be used in the construction of ribozymes and antisense sequences to control the expression of Staphylococcal genes. The DNA sequence is also useful as a source of regulatory elements for the control of bacterial gene expression. The encoded protein may be used to produce vaccines to enable a host to produce specific antibodies with antibacterial action. These vaccines and antibodies would protect a host against invasion by S. aureus, and conditions relating to Staphylococcal infection, e.g. Staphylococcal food poisoning, scaled skin syndrome, and toxits shock syndrome.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             related to their expression. The polypeptides and vectors containing them CC can also be used in immunisation methods. The products can be used for treating infection, e.g. infections of the upper respiratory tract, CC (e.g. official, bacterial tracheitis, acute epiglottitis, CC thyroiditis), respiratory (e.g. empyema, lung abscess), cardiac (e.g. infective endocarditis), gastrointestinal (e.g. secretory CC diarrhoea, splenic abscess, retroperitoneal abscess), central nervous system (CNS) (e.g. cerebral abscess), eye (e.g. blepharitis, complunctivitis, keratitis, endophthalmitis, preseptal and orbital CC cellulitis, darcryocystitis), kidney and urinary tract (e.g. epididymitis, intrarenal and perinephric abscess, toxic shock cellulitis, wound infection, bacterial myositis), bone and joint infections, (e.g. causing stomach cancer, ulcers and gastritis). The products can also be used for treating in-dwelling devices and wounds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches

treating infection, e.g. infections of the upper respiratory tract,

(e.g. otitis media, bacterial tracheitis, acute epiglottitis,

thyroiditis), respiratory (e.g. empyema, lung abscess), cardiac

(e.g. infective endocarditis), gastrointestinal (e.g. secretory

diarrheea, splenic abscess, retroperitoneal abscess), central nervous

system (CNS) (e.g. cerebral abscess), epe (e.g. blepharitis,

conjunctivitis, keratitis, endophthalmitis, preseptal and orbital

cellulitis, darcryocystitis), kidney and urinary tract

(e.g. epididymitis, intrarenal and perinephric abscess, toxic shock

syndrome), skin (e.g. impetigo, folliculitis, cutaneous abscesses,

cellulitis, wound infection, bacterial myositis), bone and joint

(e.g. septic arthritis, osteomyelitis), or Helicobacter pylori

infections, (e.g. causing stomach cancer, ulcers and gastritis). The

products can also be used for treating in-dwelling devices and wounds.

PS Claim 1; Page 321-325; 3271pp; English.

CC This sequence represents one of 5191 Staphylococcus aureus DNA sequences of the invention. The DNA sequences are recorded on a computer readable medium, preferably selected from a floppy or hard disk, random access memory (RAM), read-only memory (ROM) or CD-ROM. Homology searches using the S.aureus DNA sequences allows putative functions to be assigned so that protein-encoding or regulatory regions of commercial, therapeutic or Industrial importance can be obtained. Specifically, sequences which are cc likely to encode antigens have been identified and these polypeptides can be used in a vaccine composition against S.aureus infection. The CC s.aureus in a sample. S.aureus is implicated in numerous human diseases, including callulitis, eyelid infections, food poisoning, osteomyelitis, cc skin and surgical wound infections, scalded skin syndrome, toxic shock cs syndrome, etc. Organisms transformed with the DNA sequences can be used to the composition of the com
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              30-JUL-1997;

                                                                                                                                                                         Holder A,
WPI; 85-22
Claim 2; Fig 1; 51pp; English.

The sequence encoding the P195 protein of Plasmodium falciparum (N50530) and a peptide comprising at least one of its epitopes (see P5077) are claimed. Also claimed is a vaccine for inducing immunity to malaria comprising the novel peptide or P195 or a peptide comprising at least one epitope when derived from the new DNA sequence, together with a carrier.

Sequence 5760 BP; 2565 A; 630 C; 725 G; 1840 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This sequence encodes the Plasmodium falciparum gp190/MSP-1 (merozoite surface protein). This gene is used in a method for stabilising the gene sequences by reducing the AT content. Such products are useful in vaccines against malaria or for producing monoclonal antibodies (for passive immunisation). The complete gp190 protein can now be produced outside the parasite and has, at least over extended regions, the native pattern of folding. Larger amounts of the protein can be produced recombinantly than would be possible using the parasites as source. Sequence 4940 BP; 2196 A; 597 C; 687 G; 1460 T;

                         A computer readable medium has been developed which has recorded on it 982 nucleotide sequences isolated from the Enterococcus faecalis genome X12938 to X13919 represent these nucleotide sequences which are primary nucleotide sequences, also known as contigs. The computer based system can identify fragments of the Enterococcus faecalis genome with commercial importance. The products can be used to detect the presence of Enterococcus faecalis in samples. They can also be used for diagnosing Enterococcal infection in an animal and monitoring progression of disease, and for identifying agents which can be used to modulate the growth or pathogenicity of Enterococcus faecalis, or another related organism, in vivo or in vitro. In particular the polypeptides encoded by the Enterococcus faecalis nucleotide sequences can be used in vaccines to prevent or attenuate an Enterococcal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1358

X12938 to X13919 represent these nucleotide sequences which are primary nucleotide sequences, also known as contigs. The computer based system can identify fragments of the Enterococcus faecalis genome with commercial importance. The products can be used to detect the presence of Enterococcus faecalis in samples. They can also be used for diagnosing Enterococcal infection in an animal and monitoring progression of disease, and for identifying agents which can be used to modulate the growth or pathogenicity of Enterococcus faecalis, or another related organism, in vivo or in vitro. In particular the polypeptides encoded by the Enterococcus faecalis nucleotide sequences

Claim 2; Fig 1; 95pp; English.
This cDNA clone codes for human interleukin-1 receptor accessory
molecule (IL1-R AcM) (see W53897), a new member of the
immunoglobulin superfamily that forms a complex with type 1 IL1-R
and which has higher affinity for IL-1 than the receptor itself,
suggesting that the known high and low affinity forms of IL1-R are
in fact the receptor with or without IL1-R AcM, respectively.
The 2155 bp sequence is present in clone HMEEJ52 (deposited as
ATCC 97666) derived from microvascular epithelium (no details of
                                                                                                                                                                                                                                                                                                                                                                                                                                 and recombinant vectors are claimed. Also claimed are isolated nucleic acid molecules encoding epitope-bearing portions (see w53898-915) of IL1-R AcM. Recombinant IL1-R AcM can be used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               05-MAR-1998.

 CC This sequence represents one of 5191 Staphylococcus aureus DNA sequences of the invention. The DNA sequences are recorded on a computer readable medium, preferably selected from a floppy or hard disk, random access memory (RAM), read-only memory (ROM) or CD-ROM. Homology searches using the S.aureus DNA sequences allows putative functions to be assigned so that protein-encoding or regulatory regions of commercial, therapeutic or industrial importance can be obtained. Specifically, sequences which are likely to encode antigens have been identified and these polypeptides can be used in a vaccine composition against S.aureus infection. The CC likely to encode antigens have been identified and these polypeptides can be used in a kit for the immunodatection of S.aureus in a sample. S.aureus is implicated in numerous human diseases, including cellulitis, eyelid infections, food poisoning, osteomyelitis, skin and surgical wound infections, scalded skin syndrome, toxic shock syndrome, etc. Organisms transformed with the DNA sequences can be used for recombinant production of the polypeptides. The new DNA sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Staphylococcus aureus contig SEQ ID #85.                                         A computer readable medium has been developed which has recorded on it 982 nucleotide sequences isolated from the Enterococcus faecalis genome. X12938 to X13919 represent these nucleotide sequences which are primary nucleotide sequences, also known as contigs. The computer-based system can identify fragments of the Enterococcus faecalis genome with commercial importance. The products can be used to detect the presence of Enterococcus faecalis in samples. They can also be used for diagnosing Enterococcal infection in an animal and monitoring progression of disease, and for identifying agents which can be used to modulate the growth or pathogenicity of Enterococcus faecalis, or another related organism, in vivo or in vitro. In particular the polypeptides encoded by the Enterococcus faecalis nucleotide sequences
                                                                                                                                                                                                                                                                                                           Barash SC, Dillon PJ, Kunsch CA; WPI; 99-045171/04.

A computer readable medium has been developed which has recorded on it 982 nucleotide sequences isolated from the Enterococcus faecalis genome. X12938 to X13919 represent these nucleotide sequences which are primary nucleotide sequences, also known as contigs. The computer-based system can identify fragments of the Enterococcus faecalis genome with commercial importance. The products can be used to detect the presence of Enterococcus faecalis in samples. They can also be used for diagnosing Enterococcal infection in an animal and monitoring progression of disease, and for identifying agents which can be used to modulate the growth or pathogenicity of Enterococcus faecalis, or another related organism, in vivo or in vitro. In particular the

A Streptococcus mutans gene (T36122) codes for I/II antigen (W02098), a 185 kDa cell surface protein at least partly responsifier S. mutans adhesion to teeth. The I/II antigen includes a series of overlapping T-cell, B-cell and adhesion epitopes. Fragments (see also T36111-21) of the gene can be used to produce recombinant polypeptides (W02087-97) carrying such epitopes for use in vaccines for immunisation against dental caries. The DNA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              n DB seq
